

INDEX OF ABSTRACTS

Abdullaev, F., *Modulational Instability of Matter Waves under Feshbach Resonance Management* **1**

Ablowitz, M. J., *Dispersive Shock Waves* **2**

Abreu, E., *Numerical Simulation of Three-Phase Immiscible Flows in Heterogeneous Petroleum Reservoirs* **3**

Akers, B. and Milewski, P., *FDynamics of Solitary Gravity-Capillary Waves on Infinite Depth* **4**

Alfaro Vigo, D. G. and Solna, K., *Time Reversal for Inclusion Detection in Randomly Layered Media* **5**

Alvarez Cruz, A., Marchesin, D. and Hime, G., *Stability, Analyticity and Monotocity of the Filtration Function for Flow in Porous Media* **6**

Azevedo, A. V. F. and Marchesin, D., *The Riemann Solution of Quadratic Models for Three-Phase Immiscible Flow in Porous Media* **7**

Borges, C. A., Scaherer, C. E. and Sarkis, M., *Coarse Grid Correction Operator Splitting for Parabolic Partial Differential Equations (Presentation in Portuguese)* **8**

Bush, A. B. G., *Coupled Atmosphere-Ocean Dynamics and the Climatic Response to Hypo- and Hyperpycnal Flood Events* **9**

Caretta, B. M. C. and Boldrini, J. L., *Local Existence of Solution of a Three-Phase Field Model for Solidification* **10**

Chapiro, G., *Non-diffusive combustion Waves in Insulated Porous Media* **11**

Conceição Jr., D.T. and Sarkis, M., *Domain Decomposition Methods for Advection-Diffusion Equation* **12**

Dafermos, C. M., *Hyperbolic Balance Laws with Dissipation* **13**

Dufour, S., *The Numerical Modeling of the Flow of Polymeric Liquids* **14**

Efendiev, Y., Hou, T., Ginting, V. and Jiang, L., *Multiscale finite element methods using limited global information and applications* **15**

Eschenazi, C., Azevedo, A. V. F., Marchesin, D. and Palmeira, C. F. B., *Loss of Transversality in Riemann Solutions of Pairs of Quadratic Conservation Laws* **16**

Furtado, F., Azevedo, A. V. F., Souza, A. J. and Marchesin, D., *Riemann Solutions of Water-Alternating-Gas Oil Recovery* **17**

Galvis, J.C., Dryja, M. and Sarkis, M., <i>A Neumann-Neumann Method for DG Discretization of Elliptic Problems on Geometrically Non-Conforming Substructures</i>	18
Hime, G., Lambert, W., Schulze, B. and Marchesin, D., <i>A Model For Steam Producing Wells</i>	19
Hu, D. L., <i>Snakes on a Plane</i>	20
Huppert, H. E., <i>A Mathematical View of Solidification</i>	21
Kraenkel, R.A. and Artiles, W., <i>An Exact Equation for the Free Surface of a Fluid in a Porous Medium</i>	22
LaForce, T. and Orr Jr., F. M., <i>Semi-Analytical Solutions for Four-Component Gas/Water/Oil Displacements in One Dimension</i>	23
Lambert, W.J., and Marchesin, D., <i>Transfer of Mass Components with Phase Change in Porous Media: Analytical and Numerical Solutions</i>	24
Madureira, A. L., <i>A Multiscale Method for PDEs in Domains with Rough Boundaries</i>	25
Mailybaev, A. A., Bruining, J. and Marchesin, D., <i>In Situ Combustion in Porous Medium Containing Solid and Liquid Fuels</i>	26
Manna, M., <i>The Surface Water Wave Problem and the Green-Naghdi Approximation</i>	27
Medeiros, L. A., <i>Operators of BBM Type in Domains with Moving Boundary</i>	28
Menzala, G. P., <i>Mathematical Models in Piezoelectricity: Analysis and Exact Control</i>	29
Milewski, P., <i>A Model for Swarming with Asymmetric Sensing</i>	30
Mota, J.C. and Schechter, S., <i>Existence and Unicity of Strong Traveling Wave Solution for a Combustion Problem in Porous Media</i>	31
Mozolewski, I. and Suli, E., <i>Discontinuous Galerkin Finite Element Methods for Heterogeneous Coupling of Elliptic Equations</i>	32
Tabak, E. and Frederic, L., <i>Is the global shape of the tropopause due to diurnal forcing?</i>	33
Turner, C., Milewski, P., Tabak, E., Rosales, R. and Menzaque, F., <i>Nonlinear Stability of two-layer flows</i>	34
Palmeira, C.F.B., Eschenazi, C., Azevedo, A. V. F. and Marchesin, D., <i>Topology of Fundamental Solutions for Pairs of Quadratic Conservation Laws</i>	35
Pauluis, O., Dias, J., Friersonand, D. and Majda, A., <i>Propagation, Reflection and Transmission of Precipitation Fronts in the Tropical Atmosphere</i>	36
Peacock, T., <i>The Curious Consequences of Diffusion-Driven Flow</i>	37
Pereira, F., <i>A CFL-Free Lagrangian Approximation Scheme for Nonlinear Conservation Laws</i>	38

Pires, A. P. and Bedrikovetsky, P., <i>Existence of Elliptic Regions in Two-Phase Four-Component Flow Mathematical Model</i>	39
Priimenko, V. and Vishnevskii, M., <i>An Inverse Problem for a Model Electromagnetoelasticity System</i>	40
Raupp, C. and Dias, P. L. S., <i>Resonant Wave Interactions in the Presence of a Diurnally Varying Heat Source</i>	41
Santos, M. and Hoff, D., <i>Propagation of Singularities in Solutions of Multidimensional Navier-Stokes Equations for Compressible Flow</i>	42
Schaerer, C. E., Sarkis, M. and Mathew, T., <i>Block Iterative Algorithms for the Solution of Parabolic Optimal Control Problems</i>	43
Schechter, S., <i>Stability of Patterns in Viscous Conservation Laws</i>	44
Silva, J. D. M., <i>A Stable Numerical Method for Deep Bed Filtration in Porous Medium</i>	45
Souza, A. J., Chapiro, G. and Marchesin, D., <i>The Wave Structure For a Solid Fuel In-Situ Combustion in a Porous Medium</i>	46
Valério, J., Carvalho, M. S. and Tomei, C., <i>Efficient Method to Evaluate the Spectrum of Incompressible Viscous Flows</i>	47
Valiño Alonso, B. and Rodríguez Bermúdez, P. and , <i>Hugoniot-Maslov Chains of Shock Waves in Conservation Laws with Polynomial Flow</i>	48
Zárate Fábregas, A.R. and Nachbin, A., <i>A Reduced Model For Internal Waves Interacting With Bottom Topography At Intermediate Depth</i>	49
Zumbrun, K., <i>Numerical Determination of Stability of Viscous Shock Waves</i>	50
